Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

Allowable Subject Matter

2. Claims 1-45 are allowed.

None of the references, either singularly or in combination, teaches or even suggests:

A haptic feedback mouse device for providing haptic sensations to a user, said haptic feedback mouse device comprising:

As per claims 1-10, an eccentric mass coupled to said actuator, wherein said eccentric mass can be rotated by said actuator, and wherein said rotation of said eccentric mass causes inertial haptic sensations to be output on said housing and felt by user.

As per claims 11-21, an eccentric mass coupled to said actuator, wherein said eccentric mass can be rotated by said actuator, and wherein a magnetic interaction between said eccentric mass and said magnet causes an inertial haptic sensation to be output on said movable portion of said housing and felt by said user when said user contacts said movable position, said inertial haptic sensation influenced by the position of said eccentric mass.

As per claims 22-32, a stop member coupled to said movable portion if said actuator is coupled to said housing, or to said housing if said actuator is coupled to said movable portion, wherein said stop member is positioned at least partially in a path of rotation of said mass, and wherein said mass is moved against said stop to produce haptic sensations on said movable portion that are felt by said user contacting said movable portion.

Art Unit: 2674

As per claims 33-38, a moving magnet actuator having an actuator housing coupled to said device housing and a moving magnet coupled to said movable portion; and

As per claims 39-45, a linear actuator having an actuator housing coupled to said device housing and an actuated portion coupled to said movable portion, wherein said linear actuator moves said movable portion of said device housing linearly away from said main portion of said housing when controlled with a control signal, thereby providing a haptic sensation to a user contacting said movable portion.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kramer et al (US 2002/0021277) an interface device for controlling a graphical image and a graphical object comprising a user manipulable object in communication with the computer, a sensor to detect a manipulation of the object providing a signal to the computer to control the graphical image, and an actuator adapted to provide a haptic sensation to the palm of the user in relation to an interaction between the graphical image and the graphical object.
